

Gödel numbering.

$$p \mapsto n \in \mathbb{N}_0$$

For a prop.
 \exists a unique Gödel number

Constant sign	Gödel number	Usual Meaning
¬	1	not
∨	2	or
⇒	3	if...then...
∃	4	there is an...
=	5	equals
0	6	zero
S	7	the successor of
(8	punctuation mark
)	9	punctuation mark
,	10	punctuation mark
+	11	plus
×	12	times

Ernest Nagel
 & James Newman
 1958

$$1 = 5_0$$

$$9 = 5 \dots 5_0$$

x	13	var
y	17	var
z	19	var
⋮	⋮	⋮

Any proposition in an effective Peano-arithmetic system can be written in the above letters in linear order.

Recall: $\mathbb{N}_0 \times \mathbb{N}_0 \xrightarrow{(i,j)} \mathbb{N}_0$

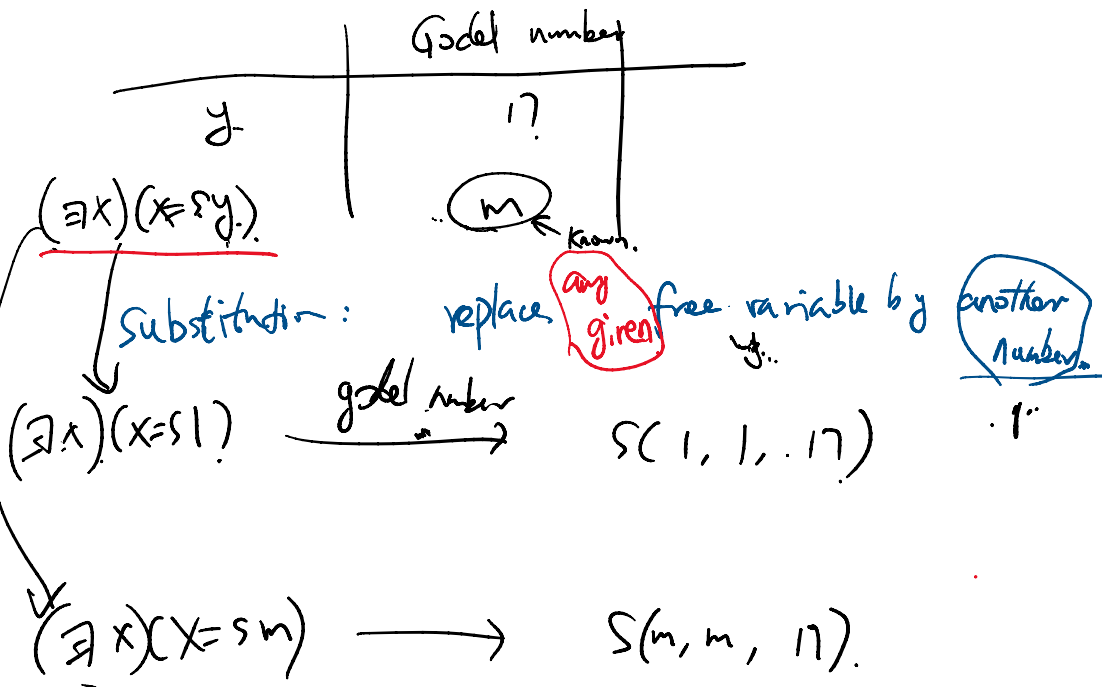

$$(a, b) \mapsto 2^a \times 3^b$$

- Rk ①: Gödel number is not a surjective map.
- ②: If p has Gödel number n , then we say $A(n, p) = 1$.
- If $A(n, p) = 1$, then from n , by unique prime factorization of n , we know p .

- Best variable

$(\exists x)(x = sy)$ free variable
all other are free.

"y has a successor" not free
"behind" quantifiers"

"The formula $sub(y, y, 17)$ cannot be proved"
 with gödel number. Gödel number. n.

"The formula $sub(n, n, 17)$ cannot be proved!"
 with gödel number

G statement, G refers to its own Gödel number.

6 statement .

7 rejects n as own value,
number

$\text{sub}(a, n, 17)$.
